**Attention:**

**Costpoint Enterprise Cloud Customers**

As part of Deltek's ongoing commitment to improve the entire Costpoint customer experience, we have made changes to maintenance packaging and how we release new features. For many years, Deltek followed a continuous delivery model where new features, fixes and regulatory updates were released together on a monthly basis. Moving forward, monthly Maintenance Releases (referred to as MR's) will only include high priority fixes and regulatory updates. New feature releases will be released once or twice a year (referred to as point releases i.e. 8.1, 8.2).

Deltek will continue to follow the cloud deployment model of applying high priority defects and regulatory updates directly to the Production Environment. Thus, MR's will be applied to all Costpoint cloud systems (Production, Implementation/Test & Development) within a 2 week timeframe of one another.

Deltek will continue to provide an opportunity for customers to "preview" the next point release. The Implementation/Test and Development Environments (Non-Production) will be updated to the next point release approximately 1-2 months prior to the Production Environment being updated. Deltek will no longer provide a separate PREV system for customers to "preview" the next point release. Customers will complete their "preview" tasks using their Non-Production systems.

Please contact your Customer Success Manager (CSM) or [GovConUpgradeTeam@deltek.com](mailto:GovConUpgradeTeam@deltek.com) if you have any questions.
